

A close-up photograph of a rustic wooden table with a live-edge finish. A long, narrow, black rectangular tray is embedded into the top surface of the table, containing a lush arrangement of various green mosses and small ferns. The wood grain is prominent and natural. The table is supported by dark, thick legs. The background is a dark, textured surface.

MOSS

just add moss!

We've always enjoyed working with natural materials so it just made sense to expand our collection to include these beautiful, spongy, - and vital to the development of new ecosystems - plants. Each piece is preserved with non-toxic food dye, is 100% biodegradable, and relies on the natural humidity in your space to remain fresh.

To give the panels a finished look, we trim all our inserts with metal or wood and recess them into the table surface. Because the material is natural, variations in color should be expected and celebrated for their individuality.

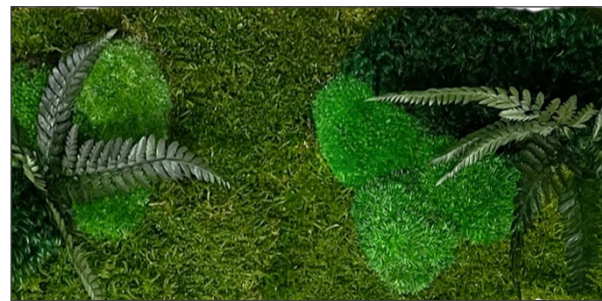

Soak in the power and beauty of one of Nature's oldest living plants with our new Moss Collection.

MOSS OPTIONS

Our moss inserts are offered in 8" round and a variety of square and rectangle sizes. Round inserts are trimmed in metal only. Square and rectangle inserts are trimmed in wood and finished to match the top or base of the table.
